ABOUT A DEGREE IN ARCHITECTURE
Architects are responsible for a wide range of services: site design, building design, interior design, detail design, specifications, contracts, construction techniques and building materials, to name but a few.

Requirements for licensing of Professional Architects vary by state. Though there have been attempts to standardize the requirements for registration, the authority, and criteria for registration are maintained on a state-by-state basis. Usually, states will offer reciprocity to persons possessing a license from another jurisdiction provided they meet certain criteria. Typically candidates for architectural registration must possess a degree from an accredited professional degree program in architecture, they must complete specific requirements of internship, and they must successfully pass all sections of the comprehensive Architectural Registration Examination before being legally permitted to use the title “architect.”

RELATED SKILLS
Good technical writing ability
Research and analytical skills
Mechanical aptitude
Ability to draw
Computer skills
Knowledge of construction
Creativity
Capability to understand measurements
Ability to conceptualize & understand spatial reasoning
Aptitude for details, logic and reasoning
