ABOUT A DEGREE IN ENERGY MANAGEMENT

Price College’s Energy Management Program has a proud and storied tradition. Established in 1958 OU created the first Petroleum Land Management program in the world, the program changed its name to Energy Management in 1999 while undergoing major curriculum revisions. The strength and uniqueness of the program is the fact that Energy Management incorporates four of OU’s strongest colleges (Geosciences; Petroleum, Geology, and Engineering; Business; and the School of Law) into one curriculum.

Energy Management seeks to produce a business school graduate with a strong and diversified understanding of the domestic and global energy industries. Graduates find opportunities in areas of exploration and production, energy financing and economics, and areas involving the trading and marketing of energy commodities.
