The Hydrologic Science minor is designed for students who are interested in expanding their understanding of the role of water in our environment.

The minor requires a minimum of 15 semester credit hours, to include at least one course each from Meteorology, Geography, and Civil or Environmental Engineering. No more than (9) hours may come from any one discipline.

For Meteorology majors, successful completion of the Hydrologic Science minor will satisfy the three upper division science electives and the required elective in meteorology, hydrology, or climatology. However the junior-level mathematics elective is NOT waived with completion of this minor.

**The minor in Hydrologic Science requires a minimum of 15 hours to be selected from:**

- CEES 4123 Open Channel Flow
- CEES 5020 Remote Sensing Hydrology
- CEES 5843 Hydrology
- ENGR 4510 Computational Hydrology
- GEOG 4273 Regional Climatology
- GEOG 4293 Hydrologic Science
- GEOG 4453 Geographic Information Systems
- METR 4303 Statistical Meteorology
- METR 4624 Radar Meteorology
- METR 4633 Hydrometeorology
