Our seminar

“THE FUTURE OF INNOVATION AND WORK”

Innovation is at the core of everything GE does as a company. We are a young, thriving, global R&D enterprise that is larger and more connected than at any other time in the company’s 130+ year history. We’re here for no other reason than to help GE’s businesses grow and make for a better world.

Under Jeff Immelt’s leadership, GE is betting long and betting global ... betting long in breakthrough material innovations like Ceramic Matrix Composites (CMCs), which will revolutionize commercial flight by taking jet engine efficiency and performance to new heights; and betting global, growing our R&D footprint in India and China and expanding our presence to Europe (Munich), South America (Brazil), the Middle East (Israel) and new locations in the US (San Ramon, CA; Oklahoma City, OK, Detroit, MI).

GE is deeply involved in things that matter to people – high quality, accessible health care, and access to clean, affordable energy, water and transportation. It’s all part of our vision, which revolves around these big themes and more like extreme machines, brilliant factories, super materials and the intelligent internet that are changing the world and people’s lives in profound ways.

This presentation will focus on how innovation works in GE to better serve our customers and to create value for our shareholders.

THURSDAY, SEPTEMBER 17, 2015
COOKIES AND COFFEE -- 1:30 P.M.
