Dr. David Rockstraw
Department Chair, Chemical & Materials Engineering
New Mexico State University

"Development of the New Mexico State University Brewery Engineering program of study in Chemical Engineering (NMSBrew)"

The New Mexico State University Department of Chemical & Materials Engineering is developing a comprehensive program to prepare students for careers across the brewing industry, and with which to provide research and analytical services to the industry. The program includes (i) a minor of study education program in chemical engineering; (ii) a dual-fermenter 1-barrel stainless steel brewery providing hands-on training in brewery operations; (iii) a full-service beer characterization analytical laboratory; (iv) international brewery studies; and (v) an industry pipeline of highly-trained student interns and permanent employees. This talk will discuss the development history, current capabilities, and future plans for NMSBrew and the Seidel Brew Lab.

**Required Graduate Student Seminar for ChE 5971**

Refreshments served before Seminar

Sponsored by:
School of Chemical, Biological and Materials Engineering
