Understanding and Meeting Children’s Needs After Traumatic Experiences

Presented by Allison Boothe, PhD

Thursday, November 2, 2017  |  6:30 - 8 p.m.
Free and Open to the Public
NO REGISTRATION REQUIRED

Perkins Auditorium
Schusterman Learning Center
41st & Yale, Tulsa

Young children who have experienced difficult or traumatic events need consistent and supportive caregiving. When trauma affects young children, typical development can be disrupted, impacting relationships and later outcomes. This presentation will discuss how parents, caregivers and communities can support young children with a history of trauma and learn how to identify when additional help is needed.

Allison Boothe, PhD, is a clinical psychologist and associate professor at Tulane University School of Medicine in the Tulane Institute of Infant and Early Childhood Mental Health, where she co-developed and directs the Tulane Infant and Early Childhood Mental Health Consultation and Support Program, which focuses on supporting young children’s social-emotional development in early education settings. Dr. Boothe has published several peer-reviewed articles and has spoken to many national groups about supporting young children including Zero to Three, the American Academy of Pediatrics, and the US Office of Family Assistance, among others. Dr. Boothe received a master’s degree in Clinical Psychology from Pepperdine University and a master’s and doctoral degree in Clinical Child and Adolescent Psychology from The University of Alabama. She completed a clinical internship and post-doctoral fellowship in infant mental health at Tulane University, where she evaluated and treated children under five who had experienced abuse and/or neglect along with their parents and foster parents.
