LIS 4103
Design and Implementation of Networked Information Services

Are you creative?
Do you like design?
Are you online all the time?
Do you want to know websites are created?

In LIS 4103, you can combine all of these interests to create, manage, and redesign a website, as well as using the basic tools of project management.

Catalog Description:

Design fundamentals for networked information services; implementation of storage, access, and distribution systems; knowledge representation methods; metadata and information structures; connectivity infrastructure; characteristics and behavior of networked audiences; systems use and usability.

Course Objectives:
Upon completion of this course, students will be able to:
- Define the process of creating or redesigning web sites
- Demonstrate the basic steps of technology project management
- Utilize critical thinking and analysis of issues in managing a project
- Implement the basic tools of project management and website design
