Program Student Learning Outcomes

College: Architecture
Program: Landscape Arch, M of LA

Graduates of the Masters in Landscape Architecture program should be able to demonstrate:

- Creative problem solving in design, planning, and project management at various scales and applications.

- Knowledge and skills in conceptual design, project and design phasing, natural and cultural systems, and public policy and regulations.

- Critical thinking skills through development of design projects and written project descriptions.

- Written, verbal, and visual communication skills through both hand and computer graphics at various levels from sketching to final renderings.

- Knowledge of construction documentation/details, construction materials, site grading/engineering, and methods through incorporation of these in design projects.
