Program Student Learning Outcomes

College: Arts & Science
Program: History of Science, Technology & Medicine, BA

Upon completion of the B.A. in History of Science, Technology and Medicine, students should be able to:

- Analyze and evaluate primary and secondary research sources in context.
- Think critically and creatively and communicate effectively in speech, writing, and new media.
- Ask and answer an historical research question, including the ability to use library and digital research tools to identify and access relevant sources.
- Demonstrate a general understanding of what it means to study the history of science, technology, and medicine (HSTM) in historical and social context.
