Course prerequisite:
You should have already successfully (A or B) completed CHEM 3053 (Org. Chem. I) or their equivalent before enrolling in this class.

Course Objectives:
By the end of the semester, you will be able to:
1. learn how to learn organic chemistry
2. learn how to think like an organic chemist
3. understand and appreciate the importance of organic chemistry in the areas of chemistry, biochemistry, bio-organic chemistry, organo-metallic chemistry, chemical engineering, the biological sciences, and daily life
4. learn how to approach organic chemistry, and science in general, from a critical, thoughtful point of view
5. apply fundamental principles of structure and reactivity to solve organic chemistry problems

Required materials
1. Organic Chemistry, (ISBN 0-13-196316-3) Paula Yurkanis Bruice—available at local bookstores or online. While I certainly suggest using any of the resources available on the CD-ROM that accompanies the text, I don't require you to use it.
2. Model kit—sold in the bookstore.

Recommended materials
1. Organic Chemistry II as a Second Language (ISBN -13 978-0-471-73808-4) by D.R. Klein. This is an excellent supplemental text that can help you to develop the fundamental skills you will need to be successful in O-Chem. It is available at the bookstore and from Amazon.com for ~$25-30. I recommend this text highly.
2. A 3-ring binder to hold your handouts and notes.
3. A pack of 3 x 5 index cards (you will probably need more than one pack).
4. A good, quiet distraction-free place to study regularly.
