

Restroom Access Statement

The University of Oklahoma is committed to universal design and maintaining a safe working and learning environment. In terms of restroom access, the university supports the inclusion of at least one fully accessible single-occupant/family restroom in new and existing buildings to the extent feasible.

In keeping with the growing and diverse population, the University of Oklahoma strives to create and sustain a campus environment that supports and values all members of our community, including students, employees, faculty, and visitors. One aspect of creating a comfortable environment is providing safe, accessible, and convenient restroom facilities. Many individuals benefit from the safety and convenience of accessible and single-occupant or family restrooms, including those with disabilities and companions of the opposite sex, families with small children, and individuals with other needs. Accordingly, the University supports the option of individuals to use the restroom that meets their individual needs or in which they feel safest.
