Advanced Programs – Course Syllabus

Course Title:  
International Economics - Finance

Course Number:  
ECON 5633-101

Course Description:  
This course deals with the macroeconomic aspects of the theories and policies of international economics. We will have three related main topics: balance of payments, exchange rates, and macroeconomic policies in an open-economy context. In addition, we will examine the working mechanism of the foreign exchange market and various financial instruments.

A large portion of the class will be devoted to the following questions: What are the exchange rates (spot and forward rates), futures and options? What's the relationship between exchange rates and current account balances? What kind of economic policies can be used to influence the interest rate, exchange rate, national output level, price level, and current and financial account balances? During the process, we will build economic models and use these models to explain various real world phenomena. For example, the students will be frequently reminded of the last twenty years' economic situations, and monetary and fiscal policies. Other examples include the Mexican peso problem at the end of 1994 and early 1995, the more recent Asian, Latin American, and Eastern European and Russian economic and currency crises, the developing EU debt crisis, and the macroeconomic relationship of the U.S. with China.
