Web Site and Web Software Accessibility Standards

Introduction
The University of Oklahoma is committed to ensuring that web sites and web-based software are accessible to as broad of an audience as possible. This commitment is reflected in The University of Oklahoma’s Digital Accessibility Policy.

The University abides by the World Wide Web Consortium’s Web Content Accessibility Guidelines (WCAG) 2.0, level AA and The State of Oklahoma’s Electronic and Information Technology Accessibility (EITA) Standards.

Since there is overlap between these two sets of standards, The University has compiled a set of standards that will help web site designers, content managers, content owners and application developers to more efficiently navigate the standard sets. The combined set of standards is introduced in the following pages. It is important to note that this set of standards should be a starting point and that the full WCAG 2.0, AA is covered in detail in the link above. Additional resources to help test for adherence to the standards can be found here.
Perceivable
Web content is made available to the senses - sight, hearing, and/or touch

Guideline 1.1
Text Alternatives: Provide text alternatives for any non-text content

**Success Criteria 1.1.1 Non-text Content (Level A)**

All *non-text content* that is presented to the user has a *text alternative* that serves the equivalent purpose, except for the situations listed below.

- **Controls, Input:** If non-text content is a control or accepts user input, then it has a *name* that describes its purpose. (Refer to Guideline 4.1 for additional requirements for controls and content that accepts user input.)

- **Time-Based Media:** If non-text content is time-based media, then text alternatives at least provide descriptive identification of the non-text content. (Refer to Guideline 1.2 for additional requirements for media.)

- **Test:** If non-text content is a test or exercise that would be invalid if presented in *text*, then text alternatives at least provide descriptive identification of the non-text content.

- **Sensory:** If non-text content is primarily intended to create a *specific sensory experience*, then text alternatives at least provide descriptive identification of the non-text content.

- **CAPTCHA:** If the purpose of non-text content is to confirm that content is being accessed by a person rather than a computer, then text alternatives that identify and describe the purpose of the non-text content are provided, and alternative forms of CAPTCHA using output modes for different types of sensory perception are provided to accommodate different disabilities.

- **Decoration, Formatting, Invisible:** If non-text content is *pure decoration*, is used only for visual formatting, or is not presented to users, then it is implemented in a way that it can be ignored by *assistive technology*.

Guideline 1.2
Time-based Media: Provide alternatives for time-based media

NOTE: If the audio or video is designated as an alternative to web content (e.g., an audio or sign language version of a web page, for example), then the web content itself serves as the alternative.

**Success Criteria 1.2.1 Prerecorded Audio-only and Video-only (Level A)**

For *prerecorded audio-only* and prerecorded *video-only* media, the following are true, except when the audio or video is a *media alternative for text* and is clearly labeled as such:

- **Prerecorded Audio-only:** An *alternative for time-based media* is provided that presents equivalent information for prerecorded audio-only content.

- **Prerecorded Video-only:** Either an alternative for time-based media or an audio track is provided that presents equivalent information for prerecorded video-only content.
Success Criteria 1.2.2 Captions (Prerecorded) (Level A)
Captions are provided for all prerecorded audio content in synchronized media, except when the media is a media alternative for text and is clearly labeled as such.

Success Criteria 1.2.3 Audio Description or Media Alternative (Prerecorded) (Level A)
An alternative for time-based media or audio description of the prerecorded video content is provided for synchronized media, except when the media is a media alternative for text and is clearly labeled as such.

Success Criteria 1.2.4 Captions (Live) (Level AA)
Captions are provided for all live audio content in synchronized media.

Success Criteria 1.2.5 Audio Description (Prerecorded) (Level AA)
Audio description is provided for all prerecorded video content in synchronized media.

Guideline 1.3
Adaptable: Create content that can be presented in different ways (e.g., simpler layout) without losing information or structure

Success Criteria 1.3.1 Info and Relationships (Level A)
Information, structure, and relationships conveyed through presentation can be programmatically determined or are available in text.

Success Criteria 1.3.2 Meaningful Sequence (Level A)
When the sequence in which content is presented affects its meaning, a correct reading sequence can be programmatically determined.

Success Criteria 1.3.3 Sensory Characteristics (Level A)
Instructions provided for understanding and operating content do not rely solely on sensory characteristics of components such as shape, size, visual location, orientation, or sound.

Note: For requirements related to color, refer to Guideline 1.4.

Guideline 1.4
Distinguishable: Make it easier for users to see and hear content including separating foreground from background

Success Criteria 1.4.1 Use of Color (Level A)
Color is not used as the only visual means of conveying information, indicating an action, prompting a response, or distinguishing a visual element.

Note: This success criterion addresses color perception specifically. Other forms of perception are covered in Guideline 1.3 including programmatic access to color and other visual presentation coding.
**Success Criteria 1.4.2 Audio Control (Level A)**

If any audio on a Web page plays automatically for more than 3 seconds, either a mechanism is available to pause or stop the audio, or a mechanism is available to control audio volume independently from the overall system volume level.

*Note:* Since any content that does not meet this success criterion can interfere with a user's ability to use the whole page, all content on the Web page (whether or not it is used to meet other success criteria) must meet this success criterion. See Conformance Requirement 5: Non-Interference.

**Success Criteria 1.4.3 Contrast (Minimum) (Level AA)**

The visual presentation of text and images of text has a contrast ratio of at least 4.5:1, except for the following:

- **Large Text:** Large-scale text and images of large-scale text have a contrast ratio of at least 3:1;
- **Incidental:** Text or images of text that are part of an inactive user interface component, that are pure decoration, that are not visible to anyone, or that are part of a picture that contains significant other visual content, have no contrast requirement.
- **Logotypes:** Text that is part of a logo or brand name has no minimum contrast requirement.

**Success Criteria 1.4.4 Resize text (Level AA)**

Except for captions and images of text, text can be resized without assistive technology up to 200 percent without loss of content or functionality.

**Success Criteria 1.4.5 Images of Text (Level AA)**

If the technologies being used can achieve the visual presentation, text is used to convey information rather than images of text except for the following:

- **Customizable:** The image of text can be visually customized to the user's requirements;
- **Essential:** A particular presentation of text is essential to the information being conveyed.

*Note:* Logotypes (text that is part of a logo or brand name) are considered essential.
Operable
Interface forms, controls, and navigation are operable

Guideline 2.1
Keyboard Accessible: Make all functionality available from a keyboard

**Success Criteria 2.1.1 Keyboard (Level A)**
All functionality of the content is operable through a keyboard interface without requiring specific timings for individual keystrokes, except where the underlying function requires input that depends on the path of the user's movement and not just the endpoints.

*Note 1:* This exception relates to the underlying function, not the input technique. For example, if using handwriting to enter text, the input technique (handwriting) requires path-dependent input but the underlying function (text input) does not.

*Note 2:* This does not forbid and should not discourage providing mouse input or other input methods in addition to keyboard operation.

**Success Criteria 2.1.2 No Keyboard Trap (Level A)**
If keyboard focus can be moved to a component of the page using a keyboard interface, then focus can be moved away from that component using only a keyboard interface, and, if it requires more than unmodified arrow or tab keys or other standard exit methods, the user is advised of the method for moving focus away.

*Note:* Since any content that does not meet this success criterion can interfere with a user's ability to use the whole page, all content on the Web page (whether it is used to meet other success criteria or not) must meet this success criterion. See Conformance Requirement 5: Non-Interference.

Guideline 2.2
Enough Time: Provide users enough time to read and use content

**Success Criteria 2.2.1 Timing Adjustable (Level A)**
For each time limit that is set by the content, at least one of the following is true:

- **Turn off:** The user is allowed to turn off the time limit before encountering it; or

- **Adjust:** The user is allowed to adjust the time limit before encountering it over a wide range that is at least ten times the length of the default setting; or

- **Extend:** The user is warned before time expires and given at least 20 seconds to extend the time limit with a simple action (for example, "press the space bar"), and the user is allowed to extend the time limit at least ten times; or

- **Real-time Exception:** The time limit is a required part of a real-time event (for example, an auction), and no alternative to the time limit is possible; or

- **Essential Exception:** The time limit is essential and extending it would invalidate the activity; or
• **20 Hour Exception:** The time limit is longer than 20 hours.

*Note:* This success criterion helps ensure that users can complete tasks without unexpected changes in content or context that are a result of a time limit. This success criterion should be considered in conjunction with Success Criterion 3.2.1, which puts limits on changes of content or context as a result of user action.

**Success Criteria 2.2.2 Pause, Stop, Hide (Level A)**

For moving, blinking, scrolling, or auto-updating information, all of the following are true:

- **Moving, blinking, scrolling:** For any moving, blinking or scrolling information that (1) starts automatically, (2) lasts more than five seconds, and (3) is presented in parallel with other content, there is a mechanism for the user to pause, stop, or hide it unless the movement, blinking, or scrolling is part of an activity where it is essential; and

- **Auto-updating:** For any auto-updating information that (1) starts automatically and (2) is presented in parallel with other content, there is a mechanism for the user to pause, stop, or hide it or to control the frequency of the update unless the auto-updating is part of an activity where it is essential.

*Note 1:* For requirements related to flickering or flashing content, refer to Guideline 2.3.

*Note 2:* Since any content that does not meet this success criterion can interfere with a user's ability to use the whole page, all content on the Web page (whether it is used to meet other success criteria or not) must meet this success criterion. See Conformance Requirement 5: Non-Interference.

*Note 3:* Content that is updated periodically by software or that is streamed to the user agent is not required to preserve or present information that is generated or received between the initiation of the pause and resuming presentation, as this may not be technically possible, and in many situations could be misleading to do so.

*Note 4:* An animation that occurs as part of a preload phase or similar situation can be considered essential if interaction cannot occur during that phase for all users and if not indicating progress could confuse users or cause them to think that content was frozen or broken.

**Guideline 2.3**

Seizures: Do not design content in a way that is known to cause seizures

**Success Criteria 2.3.1 Three Flashes or Below Threshold (Level A)**

Web pages do not contain anything that flashes more than three times in any one second period, or the flash is below the general flash and red flash thresholds.

*Note:* Since any content that does not meet this success criterion can interfere with a user’s ability to use the whole page, all content on the Web page (whether it is used to meet other success criteria or not) must meet this success criterion. See Conformance Requirement 5: Non-Interference.
**Guideline 2.4**
Navigable: Provide ways to help users navigate, find content, and determine where they are

*Success Criteria 2.4.1 Bypass Blocks (Level A)*
A mechanism is available to bypass blocks of content that are repeated on multiple Web pages.

*Success Criteria 2.4.2 Page Titled (Level A)*
Web pages have titles that describe topic or purpose.

*Success Criteria 2.4.3 Focus Order (Level A)*
If a Web page can be navigated sequentially and the navigation sequences affect meaning or operation, focusable components receive focus in an order that preserves meaning and operability.

*Success Criteria 2.4.4 Link Purpose (In Context) (Level A)*
The purpose of each link can be determined from the link text alone or from the link text together with its programmatically determined link context, except where the purpose of the link would be ambiguous to users in general.

*Success Criteria 2.4.5 Multiple Ways (Level AA)*
More than one way is available to locate a Web page within a set of Web pages except where the Web Page is the result of, or a step in, a process.

*Success Criteria 2.4.6 Headings and Labels (Level AA)*
Headings and labels describe topic or purpose.

*Success Criteria 2.4.7 Focus Visible (Level AA)*
Any keyboard operable user interface has a mode of operation where the keyboard focus indicator is visible.
Understandable
Content and interface are understandable

Guideline 3.1
Readable: Make text content readable and understandable

Success Criteria 3.1.1 Language of Page (Level A)
The default human language of each Web page can be programmatically determined.

Success Criteria 3.1.2 Language of Parts (Level AA)
The human language of each passage or phrase in the content can be programmatically determined except for proper names, technical terms, words of indeterminate language, and words or phrases that have become part of the vernacular of the immediately surrounding text.

Guideline 3.2
Predictable: Make Web pages appear and operate in predictable ways

Success Criteria 3.2.1 On Focus (Level A)
When any component receives focus, it does not initiate a change of context.

Success Criteria 3.2.2 On Input (Level A)
Changing the setting of any user interface component does not automatically cause a change of context unless the user has been advised of the behavior before using the component.

Success Criteria 3.2.3 Consistent Navigation (Level AA)
Navigational mechanisms that are repeated on multiple Web pages within a set of Web pages occur in the same relative order each time they are repeated, unless a change is initiated by the user.

Success Criteria 3.2.4 Consistent Identification (Level AA)
Components that have the same functionality within a set of Web pages are identified consistently.

Guideline 3.3
Input Assistance: Help users avoid and correct mistakes

Success Criteria 3.3.1 Error Identification (Level A)
If an input error is automatically detected, the item that is in error is identified and the error is described to the user in text.

Success Criteria 3.3.2 Labels or Instructions (Level A)
Labels or instructions are provided when content requires user input.
**Success Criteria 3.3.3 Error Suggestion (Level AA)**

If an input error is automatically detected and suggestions for correction are known, then the suggestions are provided to the user, unless it would jeopardize the security or purpose of the content.

**Success Criteria 3.3.4 Error Prevention (Legal, Financial, Data) (Level AA)**

For Web pages that cause legal commitments or financial transactions for the user to occur, that modify or delete user-controllable data in data storage systems, or that submit user test responses, at least one of the following is true:

1. **Reversible**: Submissions are reversible.

2. **Checked**: Data entered by the user is checked for input errors and the user is provided an opportunity to correct them.

3. **Confirmed**: A mechanism is available for reviewing, confirming, and correcting information before finalizing the submission.
Robust
Content can be used reliably by a wide variety of user agents, including assistive technologies

Guideline 4.1
Compatible: Maximize compatibility with current and future user agents, including assistive technologies

Success Criteria 4.1.1 Parsing (Level A)
In content implemented using markup languages, elements have complete start and end tags, elements are nested according to their specifications, elements do not contain duplicate attributes, and any IDs are unique, except where the specifications allow these features.

Note: Start and end tags that are missing a critical character in their formation, such as a closing angle bracket or a mismatched attribute value quotation mark are not complete.

Success Criteria 4.1.2 Name, Role, Value (Level A)
For all user interface components (including but not limited to: form elements, links and components generated by scripts), the name and role can be programmatically determined; states, properties, and values that can be set by the user can be programmatically set; and notification of changes to these items is available to user agents, including assistive technologies.

Note: This success criterion is primarily for Web authors who develop or script their own user interface components. For example, standard HTML controls already meet this success criterion when used according to specification.
Specific Oklahoma Electronic and Information Technology Accessibility (EITA) standards

Oklahoma’s EITA standards are based on WCAG 1.0, which varies and does not always correlate to WCAG 2.0. The following show where EITA diverges from WCAG 2.0 A and AA. Other EITA standards are met when the above WCAG 2.0 standards are met.

**EITA D**

*Style sheet independence*

Documents shall be organized so that they are readable without requiring an associated style sheet.

**EITA K**

*Text-only page*

A text-only page, with equivalent information or functionality, shall be provided to make a web site comply with the provisions of these standards, when compliance cannot be accomplished in any other way. The content of the text-only page shall be updated whenever the primary page changes. The non-accessible version must be as accessible as possible.

**EITA M**

*Link to accessible plug-ins, applets*

When a web page requires that an applet, plug-in or other application be present on the client system to interpret page content, the page must provide a link to a plug-in or applet that complies with Oklahoma Software and Operating Systems standards (a) through (l).

**EITA Q**

*Valid markup*

Use valid, industry recognized web programming standards including a document type definition or the equivalent.

**EITA S**

*Accessibility link*

A link to the agency’s Web site accessibility policy (if existing) and contact information for compliance issues relate dot the accessibility of electronic and information technology shall be include don home pages and other key pages.
