RESEARCH EXPERIENCE FOR TEACHERS

The Diversity in Geosciences Project's summer Research Experience for Teachers (RET) program focuses on providing in-depth content knowledge in the geosciences for teachers at secondary schools with high Native American populations. The five-day experience will take place on the University of Oklahoma campus and includes an intensive tutorial for utilization of existing teaching curricula and participation in original research for ongoing development of materials.

Participants are provided food and lodging, in-state travel reimbursement, and a $500 stipend. Applicants are asked to submit a cover letter, a one-page essay describing their interest in the RET and a description of any previous research activity, and the Academic Performance Index and Accountability Data report for your school. For those applicants from outside Oklahoma, applications will be accepted but transportation to OU will be the responsibility of the applicant.

2009 Research Experience for Teachers: July 20-24
Deadline for Applications: June 1, 2009
Applications should be mailed to: RET, Diversity in Geosciences Project, 810 Sarkeys Energy Center, 100 East Boyd St., Norman, OK 73019

The Research Experience for Teachers is a component of the Diversity in Geosciences Project.
Funded by the National Science Foundation
