HSCI 1003: Science, Nature, and Society
Associate Professor Hunter Heyck
Fall 2010

This course will give historical perspective on the role of science, technology, and medicine in our lives today, paying particular attention to the human dreams, desires, and experiences associated with momentous scientific and technological changes. It is designed to be an interdisciplinary meeting ground, where students from the humanities, social sciences, and science/engineering all can learn new perspectives on science, nature, and society. Course materials include films and novels as well as nonfiction.
